Release Date 15 May 2026 – DIGITAL

FORMAT	CAT. No.	UPC	GENRES
DIGI	KGRDIGI07	5050580873377	Jazz-Funk Afrobeat Psychedelia

Killer Groove Records is proud to present "High Fever", the new single by Electric Circus. A feverish plunge into a hypnotic funk groove, built around an obsessive bass line, sharp horns, dub delays and wah-wah guitars.

"High Fever" is the first single taken from *Rites*, the band's second studio album, set for release on November 27 on LP (limited edition), CD and digital. Alongside the digital release out on May 15 on all digital platforms, the single will also be available as a limited-edition 7" vinyl (500 copies worldwide) from September 25.

"High Fever" maps the sonic territory of Electric Circus with unusual confidence: a vibrant crossroads where '70s funk, afrobeat and psychedelic influences merge into an intense narrative, a sonic arc that progressively builds toward an immersive climax of synths and groove. Built around a hypnotic bass line born during a weekend of feverish creative delirium, the track unfolds as a continuous flow of energy and tension.

The groove, inspired by the funk tradition of The Meters, moves through syncopated accents with a locked-in precision, while a punchy and incisive horn section intertwines with the rhythmic fabric, establishing the

track's character from the opening bar. The arrangement gradually evolves into a deeper, more expansive dimension: dub delays and layered textures expand the sonic space, alternating with wah-wah guitars and a treated clavinet that recalls vintage atmospheres, grounded in the now.

The track moves through a darker, more nocturnal phase before opening into a climax where the saxophone rises over a bed of percussion and synths, amplifying the emotional power of the piece in a decisive and impactful way. "High Fever" is a journey into the substance of groove, where each element finds its place in a dynamic balance between instinct and construction.

The band reaffirms its approach: organic, played music born from jam sessions and developed through careful, layered sonic research. The single represents not only the first chapter of the new album *Rites*, but also a warm, visceral and richly layered sound capable of evoking vivid imagery and atmosphere without sacrificing the compulsive pull of syncopated rhythm.

The single was recorded in multiple stages between Metrò Rec in Riva del Garda and Sberdia Studio in Turin, starting with live takes of the core arrangements and continuing with dedicated sessions for synths, horns and overdubs. This layered process allowed for meticulous production work reamping, tube amplifiers and analog effects in a near-obsessive pursuit of the most accurate and defined tones. The band co-produced the record with Marco Sirio Pivetti, who also handled the mix, while mastering was entrusted to Riccardo Ricci at Velvet Room Mastering Studio in Brighton.

Based in Turin, Italy, Electric Circus deliver a musical experience that blends funk groove, afrobeat, psychedelia and world music. Following a U.S. tour and several international collaborations, the group earned critical and audience acclaim with their debut album *Canicola*. Their artistic evolution led to *On est ensemble*, an EP created with Malian duo Sahel Roots, highlighting their deep affinity for African sounds and musical roots, weaving them together with funk, blues and psychedelic elements.

Building on these experiences, Electric Circus now channel all their influences into new compositions driven by a strong groove-oriented vision, built on a live, rhythm-first aesthetic that rewards repeated listening. The new album *Rites*, due out in 2026 via Killer Groove Records, brings together funk, afrobeat and psychedelia in an immersive musical experience built on a sound that is both multifaceted and cohesive, sharpening the band's identity into something harder to ignore.

Fans of The Heliocentrics, Calibro 35, BADBADNOTGOOD, '70s jazz-funk, afrobeat and psychedelic sounds take note.
